Frame Slider Instructions
CBR1000RR 12-16 No Cut Frame Sliders

Left Side: Long slider
                   M10 x 110 x 1.25 pitch bolt
                   short bracket
                   M12 x 100 x 1.25 pitch bolt and locking nut

Right Side: Short slider
                   Long bracket
                   M10 x 80 x 1.25 pitch bolt

Remove both Fairings
Install left side first

Left Side:
Remove the left side motor mount bolt.
Install the M12 x 100mm bolt
You will be able to see the bolt go thru the frame and the motor.
Keep tightening the bolt until it is sticking out of the back of the motor about 1/2" .
Take the short side bracket with the angled steps against the motor and the slide it over the back of the bolt. Have it rest against the motor housing.
When the 2 angles mate, tighten the bolt to torque spec.
Tighten the nut to the same spec as the motor mount on the back.

Right Side:
Remove the motor bolt.
Remove the spacer that is between the motor and the frame.
Install the bracket with marking "I" facing out.
Install the factory motor mount bolt.
Rotate the bracket up, so the bracket will be in line with the frame.
Snug the bolt and make sure the bracket in line with the frame, then tighten it to factory spec.
